## Watthour Meters RF Socket Base

The Hexagram STAR<sup>®</sup> system provides fully automatic meter reading without meter readers, Vans or handhelds. STAR<sup>®</sup> Meter Transmission Units (MTU's) feature long range, licensed, narrow band transmitters that communicate with an economical network of widely spaced data collectors.

The Electric MTU for Invensys iCon Residential Electric Meter provides interval data recording for residential customers. Optimized for reading at 1 hour intervals, this MTU provides the detailed consumption profile needed to support modern customer services, advanced billing plans and electric supplier choice programs. Installed under-glass, inside the iCon meter, the result is a self-contained, cost effective solution for all customers. This combination also provides outage and restoration messages to support modern outage management processes.
